

Questions and Responses

RFP#8512 On Call Sewer Cleaning and CCTV Services

Question #1

This question is for clarification of the NASSCO software to be used.

Vender may use the newest version of Granite.Net and is not required to use the old version of Granite.Net that SacSewer is currently using. There is an understanding that the version SacSewer has been using is outdated and is on the verge of not being supported by QUES.

Response #1

SacSewer recently upgraded its version of Granite.Net. We are in the process of updating our specifications and TVI manual. The new version of Granite.Net by Cues is 6.0.2. Additionally, SacSewer does not use NASSCO for defect coding of sewer assets.

Question #2

How many vendors were on "the List" for the previous contract.

Response #2

SacSewer contracted with six vendors to provide sewer cleaning and CCTV services. SacSewer established these contracts under RFP#8426.

Question #3

As a public records request, please provide the rates of the vendors from the previous contract.

Response #3

SacSewer has a public records request process in place. Please submit a public records request by using SacSewer's Public Records Request form at <https://www.sacsewer.com/public-records-request/>.
